GENERAL SERVICE REPORT

Customer:	Coles	**Date:**	06/05/2023
Site Address:	72 Templar Road Erskine Park NSW	**Site Contact:**	Alan Vella
		Phone:	
Customer PO #:		**Internal Job #:**	3576

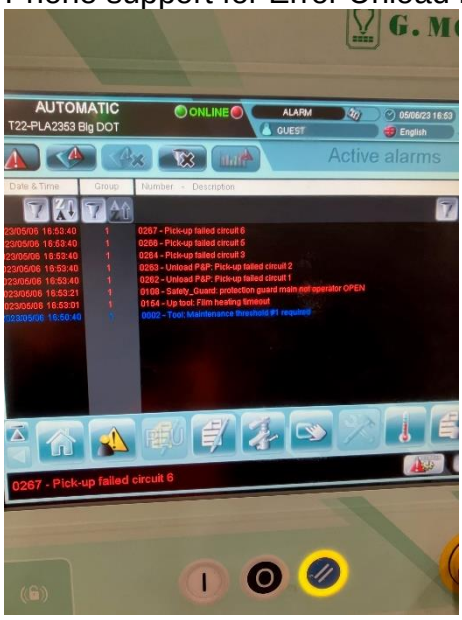
Subject: Phone Support – Platformer P&P Circuit Fault

Equipment Type:	Serial Number:	Customer Line # (if applicable):
Platformer	11614	

Equipment condition:

Work Performed:

- Phone support for Error Unload P&P 11x9 as per below photo.



- Observed error was triggered by pressure sensor reading that was not reaching lower limit value to switch OUT1. It could be suction cups on P&P was broken or the height of P&P when taking the tray was not close or long enough.
- According to team, all trays were formed well and picked up from tool but they dropped too early before reaching outfeed conveyor.
- Checked suction cups, only 1x was slightly split but we think it was not the cause of this error.
- Compare SP1 setting across all sensors. Original setting from sensor 1 to 6 were -0.5 , -0.5, -0.5, 0.2, -0.5 and -0.34 respectively. Changed all the setting to 0.2 to ignore leak during P&P cycle. We remember that SP1 setting has to be set to positive last time due to condition of P&P was not in good condition

GENERAL SERVICE REPORT

- Also change the running recipe to T03-Cryovac BIG DOT which team noticed has longer time during P&P tray pick up.
- After pressure sensor setting and running recipe T03, machine was up and running properly.
