Work Performed:

Thursday 3rd

- *Created a new recipe for 11x9 Multivac pre-made trays.*
- *A have made a few changes in the recipe with the following,*
    1. *tempreture increase 180 to 185*
    2. *compensation was slowed down from 0.9 to 1.3 sec this allows the film drop slower*
    3. *reduced the 2nd compensation valve to open before completing the cycle*
    4. *reduced the air blow to try blow at the end of the cycle*

Friday 4th

- *Created a new recipe for 9x8 Multivac pre-made trays*
- *Increase the tool temperature to 190 then 195 to tray get a good seal.*
- *Increase the compensation time to allow the film to relax slower.*
- *Problems we found was product is too big for the trays which prevents a good seal around the edges.*
- *The other problem we faced with trays having 90 degree layers on the edges and with the product too big makes the trays not as forgiving allowing the film to stress which blows.*
